# 20 year Extended Guarantee

**The Summit range of white cellular PVC fascias, soffits and claddings now has a leading 20 Year Extended Guarantee.**

The Summit 20 Year Extended Guarantee is available when Summit white cellular PVC roofline profiles are installed together with either a Swish or Kayflow white rainwater system.

In order to offer the new guarantee, installers must be registered at [www.summitpvc.co.uk](http://www.summitpvc.co.uk) where they can also register all their qualifying guarantees\*.

## **Summit Standard Guarantees**

The Summit standard guarantee for white cellular PVC profiles has been extended to 15 years and the Guarantee for colour and foiled profiles remains at 10 Years.

\*For full terms and conditions please see the Summit Extended Guarantee at [www.summitpvc.co.uk](http://www.summitpvc.co.uk).

[www.summitpvc.co.uk](http://www.summitpvc.co.uk)

## Fit Summit with Confidence

- Will not discolour
- 20 Year Extended Guarantee available
- White and foiled products
- Class 1 fire rated to BS476:Part 7
- BSI Kitemarked
- Manufactured under ISO9001

## ...and take it easy

- No Painting
- No Rot
- Easy to clean
- Long Life Span
- Recyclable

 "W" added to the code denotes the foil colour on a white base

\* This product is coloured NOT foiled

## Access Systems

SAFETY FIRST!

Never attempt to access the work area with an unsupported ladder or without a stable deck. Always use a full scaffold platform or a purpose made cantilevered deck system with guard rails in place.

## Health and Safety

Full health and Safety information is available on request.

## Storage & Handling

Load and unload by hand and support both ends of a 5m length when handling. Stack no higher than 1m, in packing sleeve on a flat base. Avoid contact with solvents, paint, creosote, bitumen etc.

## Cutting/Shaping

Use conventional carpentry tools including fine toothed saws.

Power tools may be run at speeds appropriate for timber.

Nail and screw holes do not require pre-drilling.

## Fascia Boards

Summit Sumo, S16 boards and foiled boards are able to support the weight of the lower row of tiles without the need for a tilt fillet or kick plate.

## Fixings

A4 grade stainless steel plastic headed nails or capped screws.

	Fixing	Code	Size	Qty	Max Centres
<b>Roofline</b>					
Sumo/S16	Nail	C083	65mm	2	
	Screw	C072	50mm	2	
9mm Cover Boards	Nail	C082	50mm	2	White 600mm Foiled 400mm
		C071	40mm	2	
Flat Boards	Nail	C081	40mm	2	
	Screw	C071	40mm	2	
<b>Cladding</b>					
White*	Nail	C204	33mm	1	600mm to 2 storeys 400mm 3 - 5 storeys
Foiled*	Nail	C204	33mm	1	400mm

\* Ensure plank ends are always nailed

## Expansion Gaps

Always leave a minimum 4mm expansion gap at the end of each board, ie where two boards meet leave 8mm overall.

## Sealants

Use a low modulus silicone (BS 5889 Type A). Use a primer when bonding to GRP, stainless steel, aluminium or untreated wood. Do not use with polycarbonate sheet.

## Asbestos

By law all asbestos materials must be removed by trained operatives under strictly controlled conditions. If you suspect that asbestos is present you should consult your Local Authority.

## Ventilation

**IMPORTANT** - Roof voids must be ventilated in order to stop warm air condensing on cold surfaces. Condensation encourages rot and mould growth.

Foiled cladding installations can suffer from expansion and contraction due to heat absorption, therefore it is important to provide a free air path between vertical battens. Continuity of this ventilation path can be achieved by venting into the eaves or by leaving a 10mm air gap between the cladding and soffit.

## Current Ventilation Requirements

### Duo-Pitched Roof

(greater than 15 pitch but less than 70)

### Mono-Pitched Roof

(greater than 15 pitch but less than 70)

### Duo-Pitched Roof

(greater than 15 pitch)

### Flat Roof

(less than 15 pitch)

## Sequence of Work

### Preparation Checklist

- Use proper access equipment (p28).
- Inspect for asbestos (p29).
- Push back the lower rows of tiles.
- Remove enough gutter, fascia, and soffit for one day's work only.
- Inspect rafters/laths and replace rotted timbers.
- Set up fixing points at maximum centres: white 600mm, foiled 400mm.
- Make sure ventilation is sufficient (p29).

- A. Cut back rotted felt to a clean edge.
- B. Fit suitable timber hangers (preservative treated) to support soffit boards. Screw hangers to rafter sides checking for level. Deep soffits must be nailed up every 200mm max across their depth. Set up support at hipped corners.
- C. Set up string lines to check vertical/horizontal faces of rafter feet and hangers for straight and level.
- D. Nail soffit board to hanger. Inner edge of soffit abuts to wall or sits on bricks. Outer edge of soffit should over hang by 10mm to fit groove in back of fascia board.
- E. Nail fascia board to rafter feet (check fixings p28) with sufficient height to create tile kick.
- F. Make soffit and fascia joints **between** rafters.
- G. Fit a dpc material under the existing felt.  
New material must dress into the gutter.
- H. Fit gutter brackets directly to replacement fascias of 16mm and above, in accordance with manufacturer's recommendations. Ensure correct fall in the gutter towards the down pipe.
- I. Box end construction. See p32.

### Notes for Over – Capping

1. Check the expansion gaps and fixing centres detailed on page 28/29.
2. All over-capped timber **must** be sound.
3. The existing timber fascia must support the weight of tiles and the guttering.

### F Joints

### B Support blocks at hipped corners

## Box End Construction

- A. Finish fascia level with the face of the rafter gable. Soffit should over hang by 10mm and may be cut square or mitred.

**Note:** Timber hangers should be installed as required to locate box end structure.

- B. Measure and cut box end from a deep board. Front edge should tilt up to match height of fascia board.
- C. Measure and cut fascia to form the return to gable wall.
- D. Remove section from corner joint to fit around rafter.
- E. Fix bargeboard directly to gable rafter.

## Box End Construction Options

## Window Boards & Trims

### General

- Fix to dry, sound timber or masonry with a general purpose adhesive, where necessary, using stainless steel plastic headed screws or nails.
- Do not fix to damp surfaces. If there is any risk of damp after fixing, use a low modulus silicone.
- Rotten or damaged timber should be replaced before over capping. On irregular surfaces use packing pieces where needed.

- A. Window board; choice of:
  - 16mm Bullnose (replacement unit)
  - 9mm Bullnose Window Board (capping)
  - 9mm Reveal/Cover Board (capping)
  - Keyboard Board (replacement)
- B. End cap, cut to suit (P17 and P24)
- C. Choice of Trims (See P16 and P22)
  - 12mm Quadrant featured PQ012 (P16 and P22)
  - alternatively Window board Channel C037 (P15)
- D. 9mm Reveal Liner (Flat Board or Cover Board) (P14 and 15)
- E. Architrave Trims (See P17 and P22)
- F. Skirting Profiles (See P17 and P22)
- G. External Cill (See P26)

## Cladding Installation Sequence of Work

- A. Frame battens
- B. Battens around openings.
- C. Intermediate vertical battens.
- D. Starter trims (or bottom angle ventilation strip, as appropriate, see inset illustrations).
- E. Vertical perimeter trims, corner trims (where two-part trims are used, fix only the inner part).
- F. Top perimeter trims (These engage inside the vertical trims).
- G. Packings to battens as required for any cut planks.
- H. Plank profiles and joint covers or centre joint trims as appropriate (see p 13).
- I. Outer components of two-part trims.

Recommended min. batten depth to create ventilation path behind cladding panels:  
 White cladding = 25mm  
 Coloured cladding = 50mm

### Notes:

For maximum fixing centres see p 28.

Use ventilator C065 to create continuous air gap behind the cladding.
